

EDUCATION

McGill University

BSc. Computer Science

GPA: 3.56/4.0

Jan. 2022 – Dec. 2024

Montreal, Canada

EXPERIENCE

Software Developer (Full-time)

Morgan Stanley, Montreal

Feb. 2025 – Current Day

- Built an options watch blotter from the ground up using AngularJS, enabling real-time monitoring and interaction.
- Migrated multiple Angular projects and dependencies across repositories and contributed to shared UI libraries.

Technology Analyst Intern

Morgan Stanley, Montreal

May. 2024 – Aug. 2024

- Speeding up Archy's loading time through caching of the graph state in Mongo DB.
- Improving Archy's user experience by adding new node types in the graph such as databases and treadmill instances, adding new edge types for connection states, and adding new filtering tools within the UI.

Tools: Python, Angular JS, Vis JS, Next JS, Jenkins, Git, Linux

Technology Analyst Intern

Morgan Stanley, Montreal

May. 2023 – Aug. 2023

- Handling the container-based redeployment of VCON using Docker and leveraging Artifactory for image management.
- Utilizing Kubernetes for autoscaling and load balancing to ensure optimal performance of the VCON service.
- Developing Helm charts for streamlined deployment and version control, enhancing configuration management.

Tools: Docker, Kubernetes, Helm Charts, Artifactory, Jenkins, Git, Linux

Full-Stack Developer Intern

Autodesk, Montreal

Jan. 2023 – Apr. 2023

- Created front-end UI(s) for both the User Status Diagnostic Tool and Session Request Manager in the SHOTGRID Platform.
- Wrote Jest unit tests and created Storybooks for all my React components, thus reaching 100% coverage on all code.
- Modified the SHOTGRID Cross Site Service API calls, thus minimizing UI loading time by at least 3 seconds.

Tools: React JS, Jest, Jenkins, Storybook, Ruby on Rails, Webpack, Git

Software Engineering Intern

Flare Systems, Montreal

Sep. 2021 – Dec. 2021

- Fixed UI issues such as wrong URLs, malfunctioning feeds, and broken buttons/links thus enhancing the user experience.
- Added several UI features to Firework like copy/paste button functionality, query-based highlighting, and new data feeds
- Automated admin login process using Vue.js, eliminating the need for manual credential copying.
- Designed and edited necessary tests for bug-fixes before running them through a GitLab CI/CD pipeline.

Tools: Vue JS, JavaScript, CSS, GitLab, Postman, Linux, Sentry

Software Engineering Intern

AI Launch Lab, Montreal

Jun. 2021 – Aug. 2021

- Processed the crypto-stock market dataset and extracted relevant financial indicators such as MACD, RSI, SMA, and EMA.
- Applied classification algorithms on the processed data to categorize stocks as bearish, bullish, or neutral.
- Compared the efficiencies of different AI models (ex: Regression, LSTMs, and KNNs) in predicting future stock prices.

Research Assistant

Prometheus Lab, McGill University

Sep. 2022 – Dec. 2022

- Built a proof of concept using TensorFlow.js and React JS for hand gesture-based accessibility on webpages.

EXTRACURRICULARS

Development Lead

McGill Competitive Programming

Sep. 2022 – Present

- Build full stack webapps to provide members with learning materials and design projects for the club such as Tech Games.

Machine Learning Bootcamp

McGill Artificial Intelligence Society

Jan. 2022 – Apr. 2022

- Built a music genre classifier with 92% accuracy using a CNN, as part of an accelerated machine learning bootcamp.

PROJECTS

PeerChat – iOS Peer-to-Peer Messaging App

- Built a real-time offline chat app using Swift's MultipeerConnectivity for local peer discovery and messaging.
- Designed a modern SwiftUI front-end with support for text, image sharing, avatars, and persistent nicknames.
- Integrated AVFoundation and PhotosUI for media handling and local storage with UserDefaults.

Tools: Swift, Swift UI, Multipeer Connectivity, AVFoundation, PhotosUI, UserDefaults

COVID-19 detection through Chest X-rays (McMed Hacks Hackathon Winner)

- Designed a Convolutional Neural Network that classifies chest X-Rays as COVID-positive with an accuracy of around 90%.

*Tools: Python/Google Collab, KERAS, Matplotlib, NumPy, Pandas, Seaborn*U-Glean App (1st Place Winner at Morgan Stanley "Code to Give" Hackathon: Earth Day Challenge)

- Built a social media-style web app to organize gleaning events, connecting volunteers and hosts to reduce food waste.

Ringtonify Web App

- Designed a ringtone maker using AWS services (Lambda, S3, Amplify) + React JS.
- Automated ringtone clipping using AWS Lambda, S3, and webhooks for scalable audio processing.

Tools: AWS Lambda, AWS S3, AWS IAM, AWS Amplify, AWS CLI, AWS Cloud-watch, VS Code

SKILLS

- Languages:** Java, Python, React JS, JavaScript, Node JS, C, SWIFT, GIT, NoSQL, HTML/CSS, Typescript, OCAML, Assembly
- Tools:** AWS (EC2, S3, Lambda, Amplify, CloudWatch), Unix/Linux, Docker, Kubernetes, Helm, MongoDB, Jest, Jenkins
